

ABSTRACT OF THE DISCLOSURE

Data selected by a user side is directly sent to a type of an output device having a predetermined function from a supplier side. Thereby, since the data
5 does not pass through an information processing device on the user side, it can be prevented that the data are varied or obtained dishonestly.

Furthermore, charge information that is generated in response to an output of the data is directly sent
10 to the supplier side from the output device. Thereby, since the charge information does not pass through the information processing device on the user side, variations of the charge information can be prevented.
